Question 8: In summer, the sun does not set for nearly three months.

T	F

Read the following passage and write the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.

In the last 100 years, technology has completely changed the way we live. At the touch of a button, we can look up almost anything we need to know on the Internet. We have electricity, aeroplanes, television, and we have ever been to the moon. So what sort of inventions will there be in the 21<sup>st</sup> century? Indeed, is there anything important still left to invent?

It seems that there is, scientists all over the world are looking into nanotechnology with a great deal of interest. This is the science of building small machines – and when we say small, we mean very small. To give you an idea of the size scientists are talking about, these machines would be about a million billion times smaller than the smallest bit of dust.

Nanotechnology will bring about enormous changes. Doctors, for example, will be able to cure any illness. The environment will be improved because it will be possible to take the polluted air we breathe and make it clean again. But perhaps the most exciting thought of all is that we won't have to wait a thousand years for nanotechnology – many people believe there is a good chance it will come in our lifetime.

Question 9: Has technology completely changed the way we live in the last 100 years?

- A. Yes, it has.
- B. No, it isn't.
- C. No, it hasn't.
- D. Yes, it is.

Question 10: Where can we look up almost anything we need to know?

- A. In the dictionary.
- B. In the electronic book.
- C. On the internet.
- D. In the library.

Question 11: Who are looking into Nanotechnology with a great deal of interest?

- A. Engineers.
- B. Workers.
- C. Scientists.
- D. Doctors.

Question 12: Which of the following is not true?

- A. Nanotechnology will bring about some changes in the medical field.
- B. Many people believe that they have to wait a thousand years for nanotechnology.
- C. The size of the machines will be much smaller than the smallest bit of dust.
- D. Scientists have a lot of interest in nanotechnology.

Write the letter A, B, C, or D on your answer sheet to indicate the word whose underlined part differs from the other three in pronunciation in each of the following questions.

Question 13: A. thanks      B. weather      C. tooth      D. anything

Question 14: A. cooked      B. arrived      C. watched      D. stopped

Read the following passage and write the letter A, B, C, or D on your answer sheet to indicate the correct word or phrase that best fits each of the numbered blanks.

*Read the following passage and write the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.*

In the last 100 years, technology has completely changed the way we live. At the touch of a button, we can look up almost anything we need to know on the Internet. We have electricity, aeroplanes, television, and we have ever been to the moon. So what sort of inventions will there be in the 21<sup>st</sup> century? Indeed, is there anything important still left to invent?

It seems that there is, scientists all over the world are looking into nanotechnology with a great deal of interest. This is the science of building small machines – and when we say small, we mean very small. To give you an idea of the size scientists are talking about, these machines would be about a million billion times smaller than the smallest bit of dust.

Nanotechnology will bring about enormous changes. Doctors, for example, will be able to cure any illness. The environment will be improved because it will be possible to take the polluted air we breathe and make it clean again. But perhaps the most exciting thought of all is that we won't have to wait a thousand years for nanotechnology – many people believe there is a good chance it will come in our lifetime.

**Question 13:** Has technology completely changed the way we live in the last 100 years?

- A. No, it isn't.

### ***TAPESCRIPT LISTENING 1***

If you live in an earthquake zone, you should take some time to look around our house. Place heavy books on the bottom shelf of your bookshelves. Block the rollers on your fridge and washing machine to prevent them from moving. Put hanging potted plants in plastic containers. Check the mirrors in your bathroom and bedroom. Make sure they can't move. Don't put your bed next to a window.

Planning where you are going to be during an earthquake is very important. The first thing to remember is to stay inside. Then you should sit under a strong table or doorway, or stand in the corner of a room.

Alaska is perhaps the most amazing state in the USA. It has coastlines facing both the Arctic Ocean and the Pacific Ocean. This state has an incredible three million lakes. That's four lakes per person living there.

Many cities in Alaska cannot be reached by road, sea, or river. The only way to get in and out is by air, on foot, or by **dogsled**. That's why Alaska has the busiest sea airport in the world, Lake Hood Seaplane Base. Nearly two hundred float planes take off and land on the water of this airport every day. It is a really fun scene to watch.

Alaska is called the land of Midnight Sun because in summer, the sun does not set for nearly three months. But in winter the sun stays almost unseen.
